

## DRIK-O-MAT

The original drinking cup

- Anatomical design of the drinking cup
- Good hygiene and low water waste
- Drinking nipples can be adjusted
- Increased water intake = increased feed intake
- Abundant supply of clean water for greater growth, better feed conversion and less diseases
- Low work consumption in daily operation and cleaning
- Large water savings due to the adjustable nipples and less manure

# DRIK-O-MAT®

The design of the DRIK-O-MAT® drinking cups gives a number of unique advantages...

The heaviest thickness of material in the market and closed, bend edges guarantee a very strong drinking cup, which lasts for years. The bend edges also prevent dirt accumulation and injuries. The rounded design ensures that there will be no blind corners and the closed design above prevents dung in the drinking cup and thereby it will always be clean. The water nipple is placed in the bottom of the drinking cup and releases only the amount of water that is actually drunk. This means considerable water savings and considerable reduction in the quantity of slurry.
